Porcini

The Porcini range grew from a subtle exploration into the elegantly simple form of the mushroom. A series of organic shapes and forms were reinterpreted to form these beautifully crafted and sustainable pieces.

The Porcini lighting range offers two different designs:

Porcini Stem comprised of a Standard Lamp and Table Lamp, expressing graceful lines and full figured curves.

Porcini Canopy comprised of various sized Pendant Lamps, creating a highly tactile arrangement of forms.

The shade design is informed by the naturally occurring structure found to the underside of the mushroom, where a series of thin oak members act as an inherent part of the shade support. The outer oak veneer shade is covered with an organic growth of felt, which as in nature is encouraged to form it's own beautiful pattern.

The shades across the entire Porcini lighting range are interchangeable to achieve multiple size combinations.

Sustainable Materials

The materials we have selected are from natural sustainable sources, and embody a long life span, thus ageing with grace over time:

Solid Tasmanian oak

Oak veneer

100% Wool felt upholstery

Tasmanian Oak is a non endangered timber species sourced from Australian sustainable forests, and is finished in a natural Australian biodegradable wood oil. The accompanying felt upholstery is made from 100% pure new Wool which is biodegradable and from a renewable resource, and does not contain any heavy metals or formaldehyde in the dying process.

Sustainable Packaging

All of the packaging used is sustainable, recycled and can be further recycled at the end of it's life.

Australian Made

Designed and made in Australia by the hands of local traditional craftsmen, thus strongly embodying a spirit of craft and the handmade. Bringing the role of the artisan back into design.

Self Assembly

To ensure the quality and safety of each Lamp during transit, a great deal of time has gone into the design of the packaging. The Lamps have intentionally been packaged unassembled to achieve the best outcome during transit, and thus will require assembly upon arrival. Clear instructions are included, and each part is clearly labeled to help bring your beautiful Porcini to life.

Light Source

We recommend the use of energy efficient Compact Fluorescent Lamps. Across all the shade sizes we feel the B22 Globe distributes the light more effectively due to it's larger size, and also prefer it's aesthetic form within the shades. However you may also use the smaller B22 Bulb if you so desire.

B22 Globe
Max. 20W BC CFL

B22 Bulb
Max. 20W BC CFL

BC = Bayonet Cap (fitting)
CFL = Compact Fluorescent Lamp
20W CFL = to 100W incandescent

memaké is a multidiscipline design practice that defines a progressive, playful yet sophisticated response to design. In addition to Interior Architecture and Environmental Graphics, our latest achievements in Furniture Design have seen the successful design and launch of the Porcini Lighting range, with much more to come.

A return to craft, a sustainable outlook and the use of locally sourced materials are the guiding principles behind our designs, married with the continual exploration of form, pattern, colour and texture. We feel this approach creates a highly textural and tactile experience, establishing a unique connection with the end user.

Our designs embody a contemporary yet timeless quality, resulting in memorable pieces that carry with them longevity, resonating over time to become treasured objects.
